

R Practice 7

QBA200a

January 18, 2017

Consider the customer and order data frames already made for you in R_PRactice7. Write the following queries regarding these two data frames

1. Return all of the information about the orders placed by Thomas.
2. Get a list of the names of customers who made a purchase. No duplicate names allowed.
3. What was the average amount spent for each customer. Return a NULL/NA if the customer did not make a purchase.
